SUMMARY

Backend engineer with 11 years on systems where failure is expensive: payment gateways, bank integrations, and multi-broker trading platforms. Comfortable with inter-system protocols, state machines, idempotency, reconciliation, and audited failure handling. Production background in Java/Spring Boot, PHP/Laravel, Node/TypeScript, and Python/FastAPI. Go used actively for REST APIs, concurrency, and container-based services. Working knowledge of PostgreSQL, MySQL, Redis, Docker, and CI/CD on Linux/UNIX.

TECHNICAL SKILLS

Languages: Go (active), Java/Spring Boot, PHP/Laravel, TypeScript/Node.js, Python/FastAPI, SQL
Backend & Integration: REST APIs, webhooks, idempotency, message/event flows, state machines, auth, PSP and bank integrations
Databases: PostgreSQL, MySQL, SQL Server, Redis; schema design, migrations, query optimization
Infrastructure: Docker, Git, CI/CD (GitHub Actions), Linux/UNIX, DigitalOcean, Google Cloud, Cloudflare
Working style: Cursor and AI coding assistants as daily tools; architecture and trade-off rationale written down

EXPERIENCE

Founder & Solutions Architect Jan 2026 – Present
Srabutan.com

- Architected a services marketplace platform: portfolio services, collaboration flows, and secure payments
- Built end-to-end payment flows using idempotency keys carried as HTTP headers, webhook handlers, and transaction reconciliation
- Python/FastAPI and TypeScript stack with Docker, GitHub Actions CI/CD, deployed on Railway

Senior Technology and Trading Operations Manager Jan 2014 – Dec 2025
CITT Services

- Ran technical discovery and solution design for six international brokerage platforms, producing proposals, architecture diagrams, and RFP responses
- Defined integration designs across PSPs, KYC providers (Sumsub), payment rails, and trading platforms (MT4/MT5, oneZero)
- Built backend systems and data synchronization automation with Python/Flask and n8n; Docker deployment on DigitalOcean and Google Cloud
- Designed ticketing workflows, SLA frameworks, and escalation protocols for multi-broker technical support operations
- Led incident response during trading platform outages: root-cause analysis, engineering coordination, and client communication under real-money pressure
- Enforced anti-fraud, AML, and data security controls, including client data verification through Sumsub

Host Integrator Aug 2011 – Dec 2013
Wirecard (PT Aprisma Indonesia)

- Engineered payment gateway integrations at the Wirecard subsidiary
- Connected Prisma Gateway with banking systems for corporate payment flows
- Maintained strict security, audit, and data-handling controls across every payment integration
- Stack: Java, Spring Boot, Hibernate

RELEVANT PROJECTS

Marketplace payment system (Srabutan.com). Idempotency keys carried as HTTP headers, webhook handlers, transfer and payout flows, and transaction state that survives retries. API consumers include the web app and third-party clients.

Data automation and integration (CITT Services). Data synchronization pipelines built with Python/Flask and n8n across multiple broker systems; containerized and deployed on DigitalOcean and GCP.

EDUCATION

Bachelor of Information System, Swiss German University 2007 – 2011 · GPA 3.34

CERTIFICATIONS

AWS Certified Solutions Architect (2023) · Google Professional Cloud Architect (2022)
