Hiring Manager

Hiring Team

Employment Hero

Dear Hiring Team,

Most engineers are learning to work with AI agents. I have spent years building them. When I read how Employment Hero's engineers work, I saw my current workflow, not a future to prepare for.

Backend engineer with 10+ years of server-side development and RESTful API integration across fintech, e-commerce, and SaaS domains. Production experience across PHP, TypeScript, Python, and Node.js, with disciplined testing, Agile delivery, and full-stack deployment on cloud infrastructure. Proven record of mentoring engineers and leading distributed squads, working in English across global teams.

Key achievements I'd bring to this role:

- Architected Srabutan.com marketplace backend with 50+ RESTful API endpoints and multi-gateway payment routing
- Engineered payment gateway backend at Wirecard processing transactions for enterprise clients
- Mentored engineering and support teams for 11 years at CITT Services, triaging production incidents across 6 global brokerages

I'm particularly excited about the opportunity to work on employment hero's employment operating system, an ai-first platform that pays over 3 million employees across 350,000 smes. My architecture philosophy centers on the fact that there are no right answers in architecture, only tradeoffs, and I make those tradeoffs deliberately, documented, and reversible.

I would welcome the opportunity to discuss how my background aligns with your team's needs. Thank you for your time and consideration.

Warm regards,

Bio Lumbantoruan

Backend Engineer - HR & SaaS Platforms
