Hiring Manager

Hiring Team

Korea Trade Investment Promotion Agency (KOTRA) - TmaxTibero

Dear Hiring Team,

Migration weekends are where database careers are made. For 11 years I have worked on the side of data where nothing may be lost and downtime is measured in trust, not minutes: SQL Server and MySQL environments carrying live financial transactions for thousands of corporate clients. I have done the work this role describes. I planned and executed a legacy database migration to a new ERP platform, including data cleansing, validation, cutover, and post-go-live stabilization. I tune SQL daily, write and optimize queries and stored procedures, and treat backup and recovery as a discipline rather than an afterthought. When systems fail, I am the person who reads the error, isolates the cause, and restores service. Tibero's Oracle-compatible design is familiar territory: enterprise RDBMS customers in finance, government, and telecom have the same core needs my career has served, high availability, clean migrations, and a support engineer who explains clearly and follows through. My Unix/Linux exposure is working-level, not deep, and I am upfront about that; my depth is in the database layer where it matters most. I am fluent in English, used to supporting international clients, and I know that in support, communication is half the product. I would welcome the opportunity to discuss how I can help Tibero's customers in Indonesia. Warm regards, Bio Lumbantoruan

Warm regards,

Bio Lumbantoruan

DBMS Technical Support Engineer
