Hiring Manager

Hiring Team

GudangAda

Dear Hiring Team,

My grandmother ran a small warung outside Surabaya. No supplier relationships, no promotional support, no delivery network. She bought from whoever came by, at whatever price they set.

GudangAda's mission is her story.

Senior backend engineer with 10+ years building high-transaction systems across fintech, e-commerce, and marketplace domains. Architected Srabutan.com from zero with 50+ RESTful API endpoints, Redis caching, and multi-gateway payment routing with automated reconciliation. Deep expertise in Node.js, Python, PHP, MySQL, and PostgreSQL, certified on AWS and Google Cloud. Proven track record of mentoring engineers and driving engineering standards.

Key achievements I'd bring to this role:

- Engineered payment gateway backend at Wirecard processing transactions for enterprise clients with 99.9% uptime
- Mentored engineering and support teams for 11 years at CITT Services, triaging production incidents for 6 global brokerage clients
- Built production AI coding agents with 30+ tools handling 500+ daily operations autonomously

I'm particularly excited about the opportunity to work on gudangada's marketplace platform connecting fmcg stakeholders across 500 Indonesian cities. My architecture philosophy centers on the fact that there are no right answers in architecture, only tradeoffs, and I make those tradeoffs deliberately, documented, and reversible.

I would welcome the opportunity to discuss how my background aligns with your team's needs. Thank you for your time and consideration.

Warm regards,

Bio Lumbantoruan

Senior Backend Engineer - B2B Commerce Platform
