Hiring Manager

Hiring Team

PT Inovasi Daya Solusi (IDS)

Dear Hiring Team,

A biller aggregator lives or dies on one promise: one integration, every payment, no surprises. I have spent 11 years on the operations side of exactly that promise, keeping payment integrations and settlement flows reliable at scale. Now I want to build the next layer of that promise with LLMs and RAG. Over the past two years I have moved from using AI tools to engineering with them: Python pipelines, n8n workflows, structured prompt systems, retrieval over real data, and APIs that connect models to business processes. One of my automation projects cut manual processing by around 70 percent. I write code that is versioned, documented, and tested, because I have maintained systems at 3 AM and I know documentation is not optional. I am honest that my path is engineering-through-operations rather than research. What I bring is production instinct: I know what breaks, what data actually looks like, and how to deploy something that survives contact with real traffic. At IDS, where the platform carries live transactions across every local network, that instinct is worth as much as any model. I work daily with Python, SQL, and modern AI tooling, and I learn new stacks fast. I would welcome the opportunity to discuss how I can help IDS build AI solutions as reliable as its payments.

Warm regards, Bio Lumbantoruan

Warm regards,

Bio Lumbantoruan

AI Engineer
