Hiring Manager

Hiring Team

Mineral Studio

Dear Hiring Team,

Your job post asks for someone to build e-commerce for brands in Indonesia. I have been shipping exactly that: KrispiBabi gives Indonesian brands production storefronts, and Srabutan.com runs a 50+ endpoint marketplace backend. Your checklist reads like my changelog.

Full stack engineer with 10+ years building web applications end to end, from HTML, CSS, and vanilla JavaScript interfaces to high-transaction backends on Linux and Docker. Deep practice in unit and integration testing, TDD, Git, and clean consistent code. Security and accessibility compliance built in from day one, with production experience across PHP, Node.js, Python, and TypeScript.

Key achievements I'd bring to this role:

- Converted interface designs into production storefronts for KrispiBabi, an e-commerce platform for Indonesian brands
- Administered Linux servers and Docker environments for 11 years at CITT Services, running trading platforms for 6 global brokerage clients
- Shipped Srabutan.com marketplace backend with 50+ RESTful API endpoints

I'm particularly excited about the opportunity to work on mineral's e-commerce platform for Indonesian brands, the exact product category I have been shipping with krispibabi. My architecture philosophy centers on the fact that there are no right answers in architecture, only tradeoffs, and I make those tradeoffs deliberately, documented, and reversible.

I would welcome the opportunity to discuss how my background aligns with your team's needs. Thank you for your time and consideration.

Warm regards,

Bio Lumbantoruan
