Hiring Manager

Hiring Team

PT Neuron Teknologi Indonesia

Dear Hiring Team,

We once built a system for a coaching practice owned by a non-technical founder. The first version required a developer for every content change, and she nearly stopped using it. We rebuilt it as a git-based CMS she could edit herself. Today she runs the whole site without us. That is the standard I hold: if the system is not used, it is my problem to solve, not the user's. Your job description describes the work I have done for eleven years. Clients arrive with a hunch that production should cost less and documents should not be typed by hand. My job has been turning that hunch into a system people actually use: sitting with operational staff, reading their documents, mapping their processes, writing the spec, managing the backlog, running UAT, and staying through go-live and after it. I built Srabutan.com from a hunch into a working marketplace, delivered two end-to-end ERP implementations, and spent eleven years translating business needs into systems for six global brokerage platforms. I write clean specs in English and Bahasa Indonesia, and I can talk data flows and integration limits with engineers without a translator. Neuron wants low ego, field work, and ownership. That is how I work. I would welcome a conversation, ideally at your office in South Jakarta.

Warm regards,

Bio Lumbantoruan
