Dear Hiring Team,

You are hiring a Chief Technology Officer. For eleven years I have done this job without the title: setting technology direction and keeping production secure for fintech clients. I am ready to take the seat.

Technology executive with 11+ years leading engineering across fintech, e-commerce, and SaaS. At CITT Services I led engineering and support teams serving brokers such as TitanFX, Pepperstone, and BaxiaMarkets, enforcing PCI-DSS and AML controls. I have shipped multi-tenant e-commerce, a payments marketplace, and AI agents running 500+ daily operations. AWS Certified Solutions Architect and Google Professional Cloud Architect.

Key achievements I'd bring to this role:

- Led teams of 8-12 engineers at CITT Services, delivering platforms and support for six global brokers under AML, KYC, and anti-fraud controls
- Architected and shipped Srabutan.com, a freelance marketplace with white-label Xendit payments, from zero to production
- Built production AI agents with 30+ tools and RAG memory that autonomously handle 500+ daily operations

I'm particularly excited about the opportunity to work on srabutan.com, a freelance marketplace with white-label xendit payment orchestration. My architecture philosophy centers on the fact that there are no right answers in architecture, only tradeoffs, and I make those tradeoffs deliberately, documented, and reversible.

I would welcome the opportunity to discuss how my background aligns with your team's needs. Thank you for your time and consideration.

Warm regards,

Bio Lumbantoruan

Chief Technology Officer
