Hiring Manager

Hiring Team

PT Surya Semesta Internusa Tbk

Dear Hiring Team,

At 2 AM on a Sunday, a trading platform went down and a broker's clients were frozen mid-transaction. The vendor said, check on Monday. I did not accept that answer: I traced the fault to a database deadlock and had the system back before the Asian session opened. That was eleven years of my life at CITT Services: Level 2 support for six global brokerage platforms, where timely resolution was measured in real money. The work was troubleshooting, root cause analysis, vendor coordination, and preventive maintenance, but the real job was ownership. Applications do not run themselves. What I bring to PT Surya Semesta Internusa is exactly that ownership. Your JD asks for five to eight years of application support and two end-to-end ERP implementations. I have eleven years and two implementations, backed by five years of ERP delivery, deep SQL across SQL Server and MySQL, and documentation and access-control discipline that keeps auditors calm. You also ask to identify opportunities for AI and automation. I ship that in production: n8n and Python workflows that cut manual processing by 70 percent, and AI-powered e-commerce applications on KrispiBabi and Corpus. I would welcome a conversation about how I can keep your business applications healthy, compliant, and quietly improving.

Warm regards,

Bio Lumbantoruan
