Hiring Manager

Hiring Team

Private Advertiser (Digital Banking)

Dear Hiring Team,

Digital banking applications are unforgiving: a transfer that fails on a Sunday night is not a bug ticket, it is a trust incident. Keeping that kind of system stable, secure, and delivered on schedule is a leadership discipline I have practiced for over a decade.

For 11 years I have led technology operations for real-time financial platforms, coordinating teams that kept trading systems running for more than 14,000 corporate clients across 69 countries, managing delivery from planning through implementation, and developing people: coaching and building capability until they could handle incidents I never saw.

I have managed end-to-end enterprise ERP programs, two full implementations and a legacy migration, with the outcome focus this role describes: quality, security, and stability as delivery results, not afterthoughts. My background includes anti-fraud, AML, and KYC operations, so the compliance-mindedness of banking environments is familiar.

What I am not is a career software developer, and I will be honest about that. I lead development teams from the delivery and operations side: setting standards, unblocking people, making architecture decisions that serve stability. If the role needs a leader who has carried a 24/7 platform through its bad Mondays, that is what I have done.

I would welcome the opportunity to discuss how I can help deliver your digital banking roadmap.

Warm regards, Bio Lumbantoruan
